

1st Quarter of Fiscal 2012 Conference Call

August 6, 2012

Forward-Looking Statements

- This presentation contains forward-looking statements. These statements are based on expectations in light of the information currently available, assumptions that are subject to risks and uncertainties which could cause actual results to differ materially from these statements.
- Risks and uncertainties include general domestic and international economic conditions such as general industry and market conditions, and changes of interest rate and currency exchange rate. These risks and uncertainties particularly apply with respect to product-related forward-looking statements. Product risks and uncertainties include, but are not limited to, completion and discontinuation of clinical trials; obtaining regulatory approvals; claims and concerns about product safety and efficacy; technological advances; adverse outcome of important litigation; domestic and foreign healthcare reforms and changes of laws and regulations. Also for existing products, there are manufacturing and marketing risks, which include, but are not limited to, inability to build production capacity to meet demand, unavailability of raw materials and entry of competitive products.
- The company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise.
- This material contains information on pharmaceuticals (including compounds under development), but this information is not intended to make any representations or advertisements regarding the efficacy or effectiveness of these preparations nor provide medical advice of any kinds.

S-349572 (dolutegravir; DTG)*: SPRING-2 Study

| Study No. | Patient Population | Study Design |
|---|--------------------|---|
| ING113086  | Treatment-naïve | n=822 (non-inferiority design) DTG 50 mg QD vs. RAL 400 mg BID (+ ABC/3TC or TDF/FTC) |

* Developed by Shionogi-ViiV Healthcare LLC

RAL: raltegravir PBO: Placebo

2 NRTIs: Combination drug of two nucleoside reverse transcriptase inhibitors

ABC/3TC: abacavir/lamivudine TDF/FTC: tenofovir/emtricitabine

S-349572 (dolutegravir; DTG): SPRING-2 Study

- Once daily DTG 50 mg was non-inferior to twice daily RAL 400 mg
- Good safety profile
- No integrase inhibitor (INI) mutations nor NRTI mutations were detected through 48 weeks on DTG (n=1/18 for INI and 4/19 for NRTI on RAL)

S-349572 (dolutegravir; DTG): SINGLE Study

| Study No. | Patient Population | Study Design |
|---|--------------------|---|
| ING114467  | Treatment-naive | n=833 (non-inferiority design) DTG 50 mg/ABC/3TC QD vs. Atripla QD |

◆ Initial data from Phase III SINGLE study

● Primary endpoint

- Ratio of virological suppression (<50 copies/mL) at 48 weeks:
DTG-based regimen (DTG/ABC/3TC): 88% vs. Atripla: 81%
 ⇒ Show superiority of antiviral activity of DTG
 [Difference and 95% CI; 7.4%, (+2.5% to +12.3%), p=0.003]
- Differences in efficacy were primarily driven by a higher rate of discontinuation due to adverse events on the Atripla arm

● Secondary endpoint

- Ratio of discontinuation due to adverse events:
DTG-based regimen: 2% vs. Atripla: 10%
- The most common drug related adverse events:
DTG-based regimen: GI system organ class; 22% (Atripla; 22%)
Atripla: Nervous system organ class; 41% (DTG-based; 15%)

Progress of Ospemifene, S-297995 & S-555739

◆ Ospemifene

- FDA accepted the NDA: June 25, 2012
- PDUFA action date: February 26, 2013

◆ S-297995

- US: Completion of registration in Phase IIb study

◆ S-555739

- Japan: Combination therapy with antihistamine in Phase IIb study showed reproducible significant effects compared with antihistamine alone in co-primary endpoints: changes from baseline of three nasal symptoms of allergic rhinitis
- US: Started phase IIa study in the US as part of the global development of S-555739 from the study results in Japan

Change of Phases (since May 2012)

| Code No. 【Product name】 | Category (Administration) | Indication | Area | Change of Phase |
|----------------------------|--|--|-------|--|
| S-811717 【OxiFast®】 | Oxycodone hydrochloride hydrate (Injection) | Moderate to severe pain in patients with cancer pain | Japan | Launched (May 2012) |
| S-4661 【Finibax®】 | Carbapenem antibiotic (Injection) | Pediatric infection | Japan | NDA submission ⇒ Approval (May 2012) |
| S-474474 | Angiotensin receptor blocker/diuretic combination (Oral) | Hypertension | Japan | NDA submission in preparation ⇒ NDA submission (July 2012) |
| S-524101 | Sublingual tablet of HDM allergen extracts for immunotherapy | Allergic rhinitis caused by HDM allergen | Japan | Phase II in preparation ⇒ Phase II / III |
| S-555739 | Prostaglandin D2 receptor antagonist (Oral) | Allergic disease | US | Phase IIa in preparation ⇒ Phase IIa |
| S-888711 | Small molecule thrombopoietin mimetic (Oral) | Thrombocytopenia | Japan | Phase IIa ⇒ Phase IIb |

Change of Phases (since May 2012)

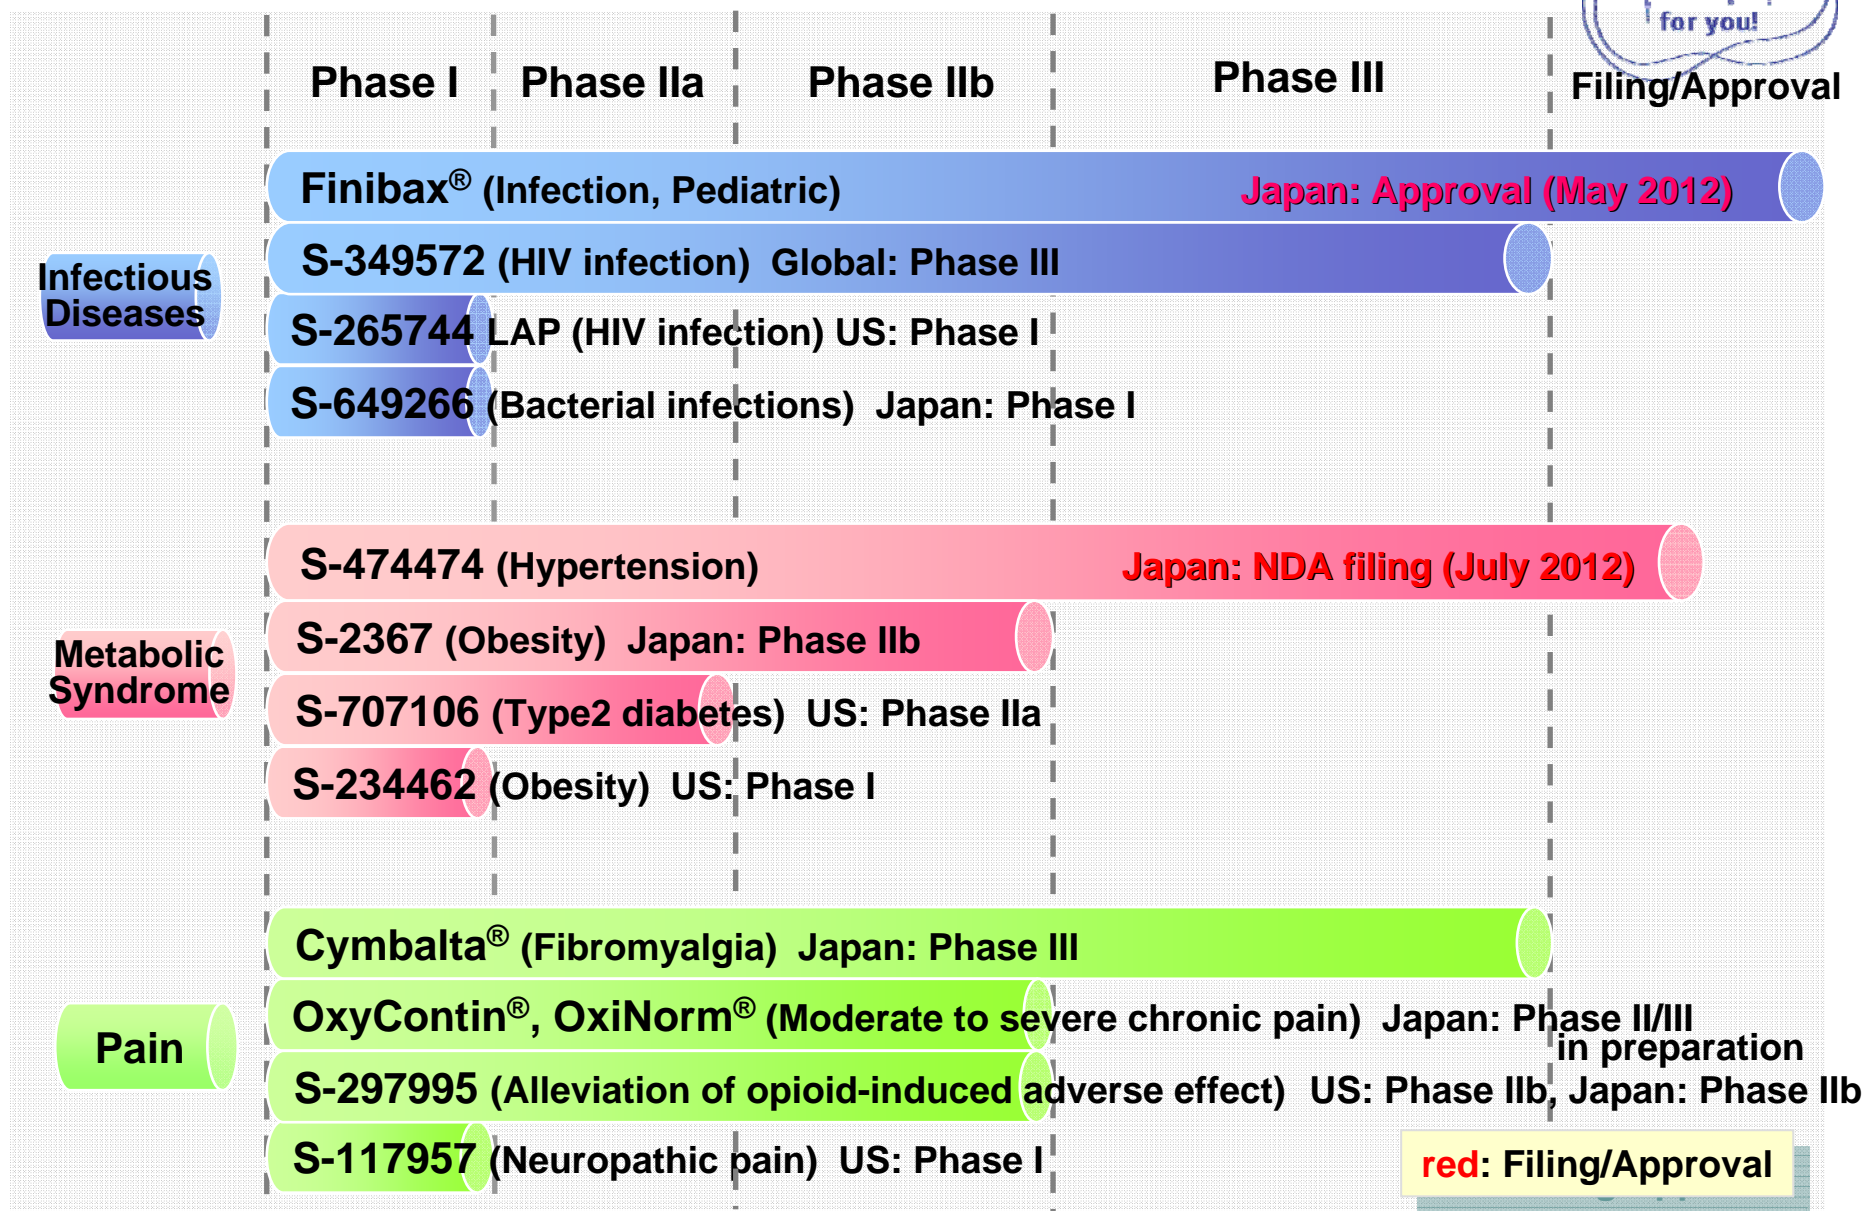

| Code No. 【Product name】 | Category (Administration) | Indication | Area | Change of Phase |
|---------------------------------|--|------------------------|-------|---|
| Lisinopril hydrate 【Longes®】 | ACE inhibitor (Oral) | Childhood hypertension | Japan | NDA submission ⇒ Approval (June 2012) |
| Metreleptin | Human leptin (Genetical Recombination) (Injection) | Lipodystrophy | Japan | NDA submission in preparation ⇒ NDA submission (July 2012) |

ACE: Angiotensin-converting enzyme

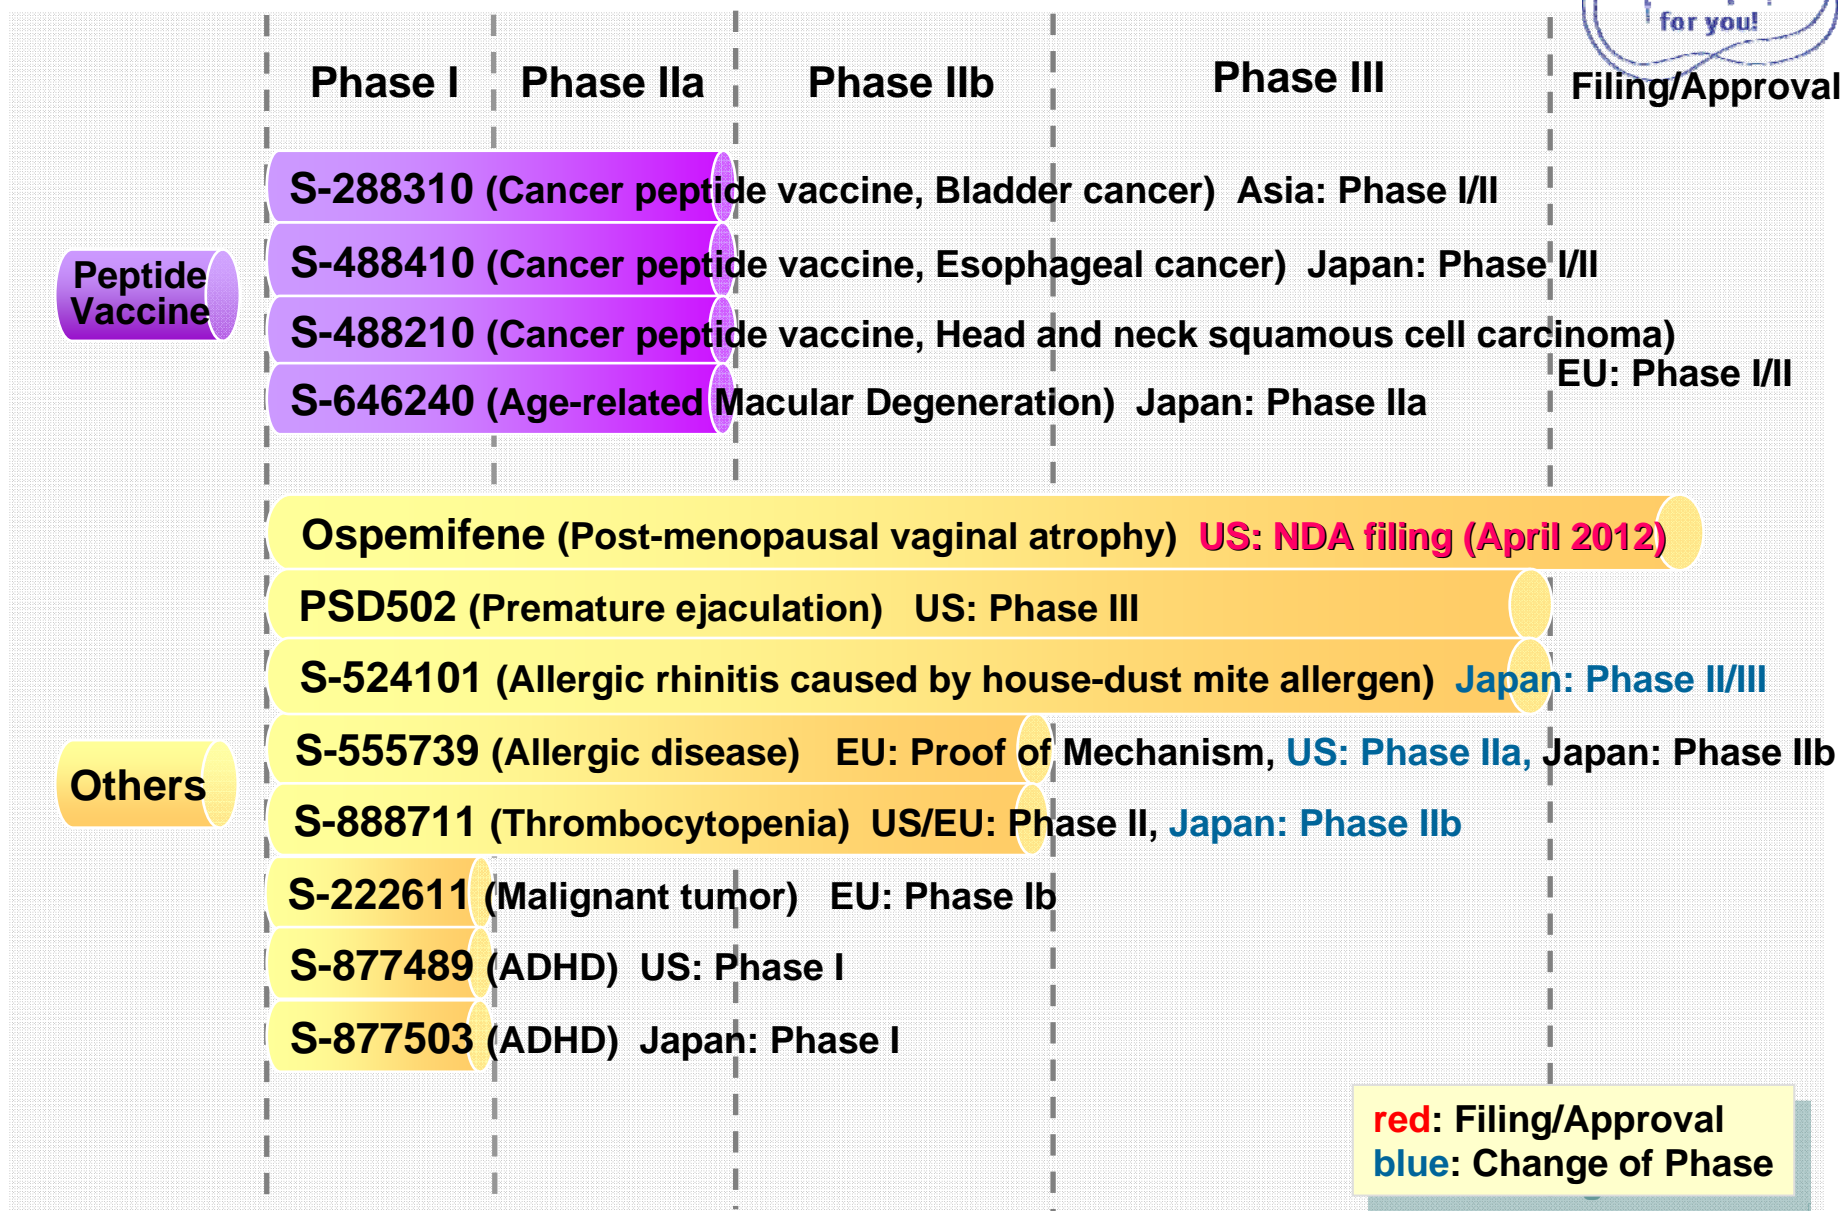

◆ Metreleptin (NDA Filing)

- In-licensed from US-based Amylin Pharmaceuticals, Inc.
- Department of Medicine and Clinical Science at the Kyoto University Graduate School of Medicine conducted an investigator-initiated trial using metreleptin as a potential leptin-replacement therapy for lipodystrophy patients.
- Leptin is a hormone secreted by fat tissue, which suppresses appetite. It is also reported that leptin improves insulin resistance, glucose metabolism and lipid metabolism.
- Lipodystrophy
 - A rare and life-threatening disorder characterized by a lack of required fat tissue for normal metabolic function throughout the whole body or in certain parts of the body
 - Highly correlated to metabolic abnormalities such as diabetes and severe insulin resistance, hypertriglyceridemia and fatty liver disease. It is known that common treatments for diabetes and hyperlipidemia are not effective for lipodystrophy.
